
EBRI Master Class Course

Bioenergy and Energy Systems

Is your business seeking new market opportunities?

Ongoing changes in the UK energy requirements and infrastructure present many opportunities for businesses of all sizes and in many sectors.

- The bioenergy sector is set to generate £12 billion of new market opportunities in the UK supply chain by 2020, combined with a £5 billion investment opportunity in energy recovery from waste after recycling.
- The UK smart grid market is forecast to generate an estimated £13 billion of GVA (Gross Value Added) including £5 billion of potential exports to 2050; and 9,000 jobs by 2030.

Forward thinking entrepreneurs and business leaders are building-up their knowledge to get to grips with these complex market opportunities.

Now is the time to join them.

Development Fund

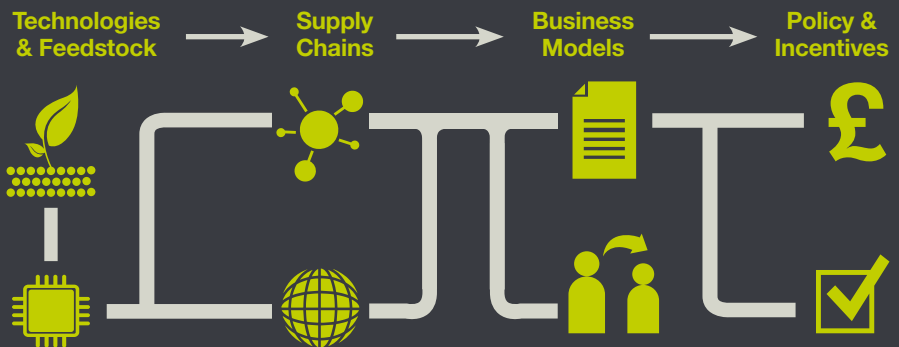

EBRI's new series of Master Class Courses provides exclusive content for entrepreneurs and business leaders covering the fundamentals of bioenergy and energy systems.

In 2015, EBRI ran its first series of the course which received much acclaim by the local business community.

Course programme

EBRI's world-leading scientists and researchers have designed a tailor-made course to introduce the practical skills, concepts and strategies your business needs to achieve success in the bioenergy and energy systems sectors.
